PROJECTS

Project Domain: Virtual Event Platform
Role: Frontend developer
Environment: React js, React hooks and Redux
Description:

This project is a web application which organizes virtual events for sponsors and Exhibitors to showcase offers and generate leads. Here exhibitor owners or an Organizer will create a virtual event, where attendees (users) who are registered with the event, will be able to join the event. In this application attendees can join lounge meetings and rooms to watch the sessions which are conducted by the organizer.

Responsibilities:

- Involved in developing some of the user interface features of the application using **React Hooks.**
- Developed a reusable component which is used at multiple parts of the application.
- Developed reducers and slices for the features using **Redux**
- Involved in peer code reviews.
- Involved in fixing bugs of different features of the application

Project Name: Celadon
Role: Developer
Environment: JavaScript, Node js, Mongodb
Description:

This utility takes the Adept (t) CAIS spreadsheet and converts it into a set of FINRA CAIS files that are ready for submission to FINRA, this is a trading related project which I have worked in my previous company Mainly we will get IMID files and Account Map Files from clients (like Celadon,Group1..etc) those files we have to submit to FINRA which is a non-governmental body in USA and then check the trade reports for particular client is traded or not

Responsibilities:

- Involved Node js coding related files.
- I used check the trade reports using using mongo db for previous day submissions and also check the server as well if both are matched then there will be no errors for that trade date
- Communicated with clients to meet up with their requirements.
- Fixing any issues/bugs found.
